PROFESSIONAL SUMMARY

Software Engineer at HSBC with expertise in SRE and Cybersecurity Operations. Specialized in vulnerability remediation and automated patch management to ensure enterprise-level security compliance. Proven track record in optimizing system reliability, reducing environment downtime, and accelerating release velocity through automated CI/CD workflows.

PROFESSIONAL EXPERIENCE

Software Engineer

Jan 2026 - Present

HSBC

- **Vulnerability Remediation:** Spearheading the identification and mitigation of high-risk security vulnerabilities via tools like **Jenkins** across global banking applications, successfully reducing the attack surface by 40%.
- **Automated Patch Management:** Standardizing and deploying critical security patches via **Ansible** across non-production environments, ensuring **100% compliance** with internal security SLAs.
- **Security Orchestration:** Developed a full-stack automated solution using **Python, Flask** and **MySQL**, enabling real-time version tracking and compliance auditing across 100+ distributed servers.

Environment Analyst (via mthree)

Nov 2024 - Dec 2025

HSBC

- **System Stability:** Resolved environment-related bottlenecks across multiple testing tiers, improving test stability and reducing downtime by 30%.
- **Deployment Automation:** Contributed to deployment automation and build failure troubleshooting, accelerating deployment speed by 25% and enhancing release reliability.
- **Technical Documentation:** Authored 10+ comprehensive RCA (Root Cause Analysis) reports and automation workflow guides, reducing recurring system issues by 40%.

SRE Intern

Jan 2024 - Oct 2024

mthree

- Gained hands-on experience in CI/CD pipeline management, infrastructure automation, and cloud deployment strategies.
- Utilized monitoring tools and system reliability engineering principles to ensure 99.9% uptime for internal project environments

PROJECTS

Enterprise Risk & Compliance Framework

- **Objective:** Eliminate manual patching overhead and ensure zero-day vulnerability compliance across 100+ server instances.
- **Contribution:** Designed and implemented an automated dashboard using **Python, Flask, MySQL**, which helps in reducing manual effort by 95% and ensuring 100% audit readiness.
- **Impact:** Minimized system exposure time to critical threats by automating the "Time-to-Remediate" from weeks to hours

Automated Test Environment

- **Objective:** Reduce downtime window and testing delays caused by unstable testing environments.
- **Contribution:** Developed a monitoring and auto-restart script for failed services and build triggers within the internal CI/CD pipeline.
- **Impact:** Achieved a 30% reduction in environment downtime, which increases availability window for major releases.

TECHNICAL SKILLS

- **Languages:** Python, MySQL, Javascript
- **Tools:** Git, Linux, Docker, Jenkins, Ansible
- **Frameworks:** Flask, FastAPI
- **Core Competencies:** Patch Management, Vulnerability remediation, SRE, Root Cause Analysis (RCA), Risk Mitigation

EDUCATION

Global Academy of Technology

Bachelor of Technology in Computer Science and Engineering

9.1 CGPA

Bengaluru, KA, India

Aug 2019 - May 2023

AWARDS & CERTIFICATIONS

- **GATE 2023 Qualified:** Top percentile in Graduate Aptitude Test in Engineering.
- **Hack-a-League 1.0 Finalist:** Among the top 10 finalist teams in a 24-hour inter-college hackathon.
- **Certifications:** Foundations of SRE (mthree), Intro to DevOps, Python for Data Science.
- **Hacktoberfest 2024:** Contributed to open-source software projects.
